

*The Board of Pharmacy has received notice of the following product recall. The Board strongly encourages pharmacies to immediately review their quality assurance and recall policies and procedures to determine if any corrective action is required.*

Apotex Corp. is recalling one (1) batch of Desmopressin Nasal Spray, USP (batch VM4231) (the "Product") to the Retail/Pharmacy level. This recall is being initiated as a precaution following the discovery of a defect in a batch of bottle caps, specifically involving dislodged or missing cap liners. This same lot of caps was used during the manufacture of the affected Product batch currently on the market. Although the recalled Product batch met all applicable quality specifications at the time of release, Apotex has decided to recall the aforementioned batch.

Based on the completed health hazard assessment, the observed dislodged or missing cap liner will not have significant adverse effects on the safety and efficacy of the Product and thus would not affect the risk benefit profile of the Product if used before expiry date. The details for the batch being recalled are listed below.
