

The Board of Pharmacy has received notice of the following product recall. The Board strongly encourages pharmacies to immediately review their quality assurance and recall policies and procedures to determine if any corrective action is required.

Fagron Compounding Services, LLC d/b/a Fagron Sterile Services (“FSS”), a federally registered 503B Outsourcing Facility located in Wichita, Kansas, is recalling all lots of unexpired Repackaged Sterile Product to the hospital / clinic level (refer to table below).

This lot-specific, recall is related to the potential for loss of sterility assurance identified during the set up and filling of the Repackaged Sterile Product. All final quality testing results passed for Sterility, Endotoxin, Potency, pH and Sub-visual Particulate. There were no environmental monitoring excursions or trends identified during the investigation. To date, Fagron Sterile Services has not received any reports of adverse events associated with these lots. Corrective actions have been implemented to prevent such instances in the future and ensure the highest quality products are delivered to our customers. As of 04Aug2025, all production, released and distribution of the Repackaged bevacizumab (Avastin) ceased until corrective actions could be completed.

FSS immediately evaluated the product affected by this recall and identified 52 currently distributed lots that were impacted:

Lot number	Item Number – Product Name	Manufacturing Date	Expiry Date	Units Released	Units Sold
